CENTRAL ARTERY / THIRD HARBOR TUNNEL BOSTON, MASSACHUSETTS

The \$7.7 billion transportation infrastructure project is transforming the city with new vehicular tunnels, viaducts, streets, highway interchanges and related support buildings.

As part of the coordinating management team led by the joint venture of Bechtel/Parsons Brinckerhoff, S+L provided overall urban design input to the project.

S+L also led the conceptual design for the award-winning vent building No.7 and several support buildings including the Toll plaza and maintenance structures at Logan Airport.
